

Haroon Gulzar

Peshawar, Pakistan

Mobile: +92318 0946768

Email: haroongulzar226@gmail.com

GitHub: <https://github.com/HaroonGulzar>

Nationality: Pakistani

Personal Profile

IT professional with expertise in data science, skilled in analytics, database management, and machine learning. Strong collaborator with proven teamwork, problem-solving, and adaptability, focused on delivering efficient and innovative solutions.

Education

2023 – 2027: Bs Computer Science

University of Peshawar

GPA: 3.89/4.00

Relevant Coursework: Data Science, Advanced Python, Data Structure, Database

Projects/Research

Phone Detection System

Key Technologies: Python, OpenCV, Tensorflow, SQLite, Flask.

Description:

- Developed a computer vision-based application that detects phones in real time, captures an image of the detected devices and store it in database with timestamp metadata.

Key Contributions:

- Implemented object detection using OpenCV and deep learning models to identify phones in live camera feeds.
- Designed a logging system that automatically captures and save images of detected phones.
- Integrated a database to store images along with detection time for audit and monitoring purposes.
- Build a user interface to review detections and manage stored records.
- Ensured system scalability for potential use in exam halls, workplaces, or restricted zones to monitor unauthorized phone usage.

AI-Powered Automated YouTube Content Creator (Prototype)

Key Technologies: Python, OpenAI API (or your LLM provider), ElevenLabs API (Text-to-Speech), YouTube Data API, FFmpeg (Video Processing), REST APIs, JSON, Git/GitHub, AI Workflow Automation, Prompt Engineering.

Description:

- Developed an end-to-end AI-powered content automation system that identifies daily trending topics, generates video scripts using AI, creates visual scenes, synthesizes realistic voiceovers with ElevenLabs, composes videos automatically, and uploads the final content directly to YouTube. The project is currently in the prototype stage with core workflow functionality implemented.

Key Contributions:

- Developed an AI-powered content automation pipeline using Python.
- Integrated AI for trending-topic analysis and script generation.
- Connected the ElevenLabs API for realistic AI voiceovers.
- Automated video creation and direct YouTube uploads.
- Integrated multiple APIs with a modular and scalable architecture.

Skills

Python, Machine Learning, PowerBI, C++, MATLAB, HTML, CSS, Javascript
